

The screenshot shows a web-based Jupyter Notebook environment. The top bar includes a file explorer icon, the filename "B1202033\_HW1.ipynb", and navigation links like "檔案", "編輯", "檢視畫面", "插入", "執行階段", "工具", "說明", and "最近於 3月14日 編輯". On the right, there are icons for "留言", "共用", settings, and a user profile. Below the top bar, there's a toolbar with "+ 程式碼" and "+ 文字". The notebook has three visible code cells. The first cell contains a simple string assignment and print statement. The second cell contains a more complex calculation involving input prompts and arithmetic operations. The third cell contains another calculation, similar to the second one but with different values. Each code cell is followed by its output, which is displayed in a light gray box. The left sidebar shows standard Jupyter icons for running, saving, and viewing files. The bottom status bar shows system information like temperature, time, and date.
